

SUSTAINABILITY POLICY OF ANDESTRACK SPA

We are a company aware of the importance of the surrounding environment and that it can be an important agent of change, improvement and development for the tourist destinations where it operates.

That is why we make a public commitment that our operation will be an example to keep complying with high standards of sustainability, always maintaining a high level of quality in the services and tourist products offered.

All our services incorporate the environmental variable in their planning and we also do it for the development of new projects, which allows us to carry them out with the minimum possible environmental and social impact. We try that an important part of the resources spent by the tourist can be taken advantage of by the local community. In addition, the sociocultural environment is of vital importance to us, since we understand that our tourist destinations are enriched by the culture, traditions, gastronomy and idiosyncrasies of its people, hence it is for us essential that all our clients can know and experience it.

All this makes ANDESTRACK SPA, establish a commitment that responds to social and environmental demands that ensure sustainable development based on the following principles:

- Against the exploitation of human beings in any of its forms, especially sexual and in particular when it affects children;
- Provide equality of job opportunities to members of the local community without any discrimination;
- Procure locally and have a sustainable purchasing system, privileging environmentally friendly products;
- Offer the best quality of services possible;
- Stimulate the local economy;
- Contribute to the integral development of the community and local welfare;
- Restoration, conservation and protection of cultural heritage;
- Minimize its generation and carry out a responsible waste management;
- Adhere to the principles of fair trade;
- Respect for local communities and especially members of indigenous peoples;
- Ensure that the transportation procedures carried out are as efficient as possible;
